## Specialists In Commercial Fencing & Access

---

Akita Fencing Ltd is dedicated to providing high quality fencing, security and access solutions to clients living and working in the South of England.

However we do work nationwide when required. We pride ourselves on our high standards and excellent customer relationships. Since we began specialising in commercial fencing, many clients have used us continuously on various industrial and agricultural projects.

All work is undertaken by experienced, qualified and fully insured staff, using high quality materials and modern equipment. Wherever possible materials and equipment are sourced from local companies with whom Akita Fencing has established a close working relationship with over the years, passing the benefits on to our clients.

## Here's How We Work

---

At the heart of Akita we pride ourselves on our three fundamental principles for our business.

### Safety first

At Akita Fencing we want to be sure we offer a safe working environment for employees and the public. To do that, we ensure that all our staff are fully trained and have the relevant skills and attitude to work safely and correctly.

Whether we are in a heavy industrial setting, housing development or a farmer's field, we undertake all our work in a safe and responsible manner, taking time to learn the core safety values of each site.

## Don't harm the environment – enhance it.

All our work takes place outside, so we feel a duty of care to protect the environment. Decades of experience tells us what to look out for and how to protect the fragile ecology of the sites we work on. Where possible we buy sustainable source materials from suppliers who share our passion for ecology.

Best of all, we are familiar with environmental regulations so we can make sure that your site and project fulfill your obligations, without last-minute delays or additional costs.

## Work means people

Openness starts before any contract with a free site survey. Our initial overview shows what we believe will be the best choice among the options. We are clear about budgets and costs as well as being realistic about timescales.

At Akita Fencing, we will take the time to understand precisely what your project requires, taking into account schedules, budgets and timescales. To make sure your deadlines are met, we work flexible hours whilst maintaining a meticulous standard. With a positive safety and environmental attitude, this adds up to a good quality service from start to finish. We are happy to guarantee the work we do.

Additionally we offer inspection and maintenance programs once the contract has been completed. In certain cases, in particular with wildlife-exclusion fencing, we can supply repair kits and training so that damaged fencing can be fixed without delay.

## Security and Commercial Fencing

Akita Fencing are dedicated to maintaining a well established reputation for being a professional commercial fencing contractor.

We provide long-lasting security fencing for industrial businesses, schools, sports facilities, shopping centres and government buildings.

## Wire Mesh

Wire mesh fencing comes in the form of welded mesh or expanded metal mesh. It is extremely versatile and flexible for many uses such as sports facilities, schools, colleges and commercial businesses.

In recent years wire mesh fencing has grown in popularity as it is extremely strong and durable, making it suitable for high security businesses and utility buildings. Mesh fencing can also be installed in areas that are not flat as posts and panels can follow the contours of the ground beneath it. The security rating of this product varies between different types of fence starting with lower security 'Pro 1000' system and working up to Twinwire and Prison Mesh.

## Chain Link

Chainlink fencing is good for strength and flexibility. For additional security, anti-climb measures can be added to the top of the fence or directly onto buildings.

## Steel Palisade

Steel palisade fencing is very hard wearing, difficult to climb and more resistant to unwanted vandals. The shape and structure of the rails is unique, offering a very effective perimeter.

## Site Hoarding

As part of Akita Fencing's extensive services we offer to our construction clients, we supply and install various sizes of site safety hoarding.

Akita Fencing undertakes work on a wide range of commercial properties and large domestic sites and we can advise on and install a wide range of fencing including:

- Close Board
- Hit and Miss Timber
- Knee Rail
- Pedestrian Rail

## Acoustic Barrier Fencing (Noise Reduction)

---

To reduce the noise from local industrial sites or retail outlets and traffic, we can supply and install acoustic barrier fencing at your business or residential property.

As well as noise reduction, this type of fencing also offers the benefits of high level privacy. Each type of fencing that we use is installed to industry standards and we use high quality materials and modern equipment.

## Ecological and Mitigation Fencing

Akita Fencing has a vast amount of experience in installing ecological and mitigation fencing. We work closely with client ecologists, or with our own, to make sure all types of Ecological and Mitigation fencing is installed correctly within deadline and adhering to current legislation.

Ecological and Mitigation fencing services include:

- Reptile exclusion fencing
- Newt fencing
- Pit fall traps
- Drift and internal capture fencing for translocating animals
- Badger exclusion fencing, one and two-way gates
- Otter and vole exclusion fencing
- Soil erosion fencing
- Fencing inspection, maintenance and removal

## Reptile and Amphibian Fencing

---

Reptile fencing is one of the terms used when referring to a wildlife barrier to keep lizards, slow worms, newts and other amphibians out of a designated area.

Reptile fencing is used as a key part in trapping the animals within enclosed areas to enable site clearance and preparation for construction.

There are variations in the specifications for wildlife barriers however they all follow a similar format. The base of the fence needs to be buried in a shallow trench.

The basic fence structure tends to be made up of polythene sheet supported by wooden stakes at regular points.

Akita Fencing install two main types of barrier fencing, a temporary fence (normally green or clear), which can be used for

drift fencing, or a permanent and more durable black fencing which is expected to last in excess of five years.

Other types of ecological fencing include otter and water vole fencing. Akita Fencing work closely with client ecologists, or with our own, to make sure all types of environmental fencing is installed correctly within deadline and adhering to current legislation.

## Agricultural and Equine Fencing

At Akita Fencing we are able to install an extensive range of Agricultural and Equine Fencing, offering our clients a wealth of experience. Akita knows how important it is to find the right fence for our clients to invest in. We believe our approach has helped us to build a peerless reputation for choice, price, deadlines whilst always considering the environment.

posts are required. Netting is galvanised to British safety standards and the finish can be galvanised or green.

A variety of different posts can be used including untreated softwood for cost-effective temporary fencing or D.O.T. timber with a thirty year life expectancy. Chestnut posts can also be used for a long-lasting ecologically friendly fence.

## Deer Fencing

**To stop deer damaging crops and saplings, we install high tensile netting to make a strong fence. Tight lock knots can be used to make it stronger.**

Made using a continuous vertical wire, these fences are ideal for protecting forests. We can make the lower half of the fence more closely spaced taking into consideration different breeds of deer and fawns.

## Rabbit Fencing

Installing rabbit fencing will prevent damage to crops and young trees.

## Chestnut Post and Rail

This is an environmentally friendly fence because the wood comes from fully renewable sources with minimal transportation.

Riven chestnut post and rail is one of the most popular types of agricultural fencing, producing a natural, rustic look. It is both aesthetically pleasing and comes from sustainable woodland.

## Stock Fencing

**This type of fencing is suitable for almost all types of stock, with many variations to suit every site.**

High tensile stock fencing offers greater strength as the wire is flexible and resilient and the tension means fewer timber

## Half-Round And Motorway Post And Rail

---

The most effective paddock fence is a half-round made of treated softwood with two, three or four rails nailed onto it.

Milled halfround is a more symmetrical option but is more suitable for decorative purposes rather than strength. Alternatively square posts and rails can be used.

## Horse Netting

---

Horse netting is typically higher than traditional stock fencing, featuring tight gaps in the wire which prevent horses' feet becoming tangled. It is safe and secure and ideal when other livestock shares the same or neighbouring fields.

## Poultry And Pheasant Pens

---

We can provide pheasant-friendly netting to our stock fences to give game birds free access, while restricting the movement of stock. We make game-bird release pens and fox-proof enclosures for all types of poultry. These can be made traditionally using buried chicken-wire, multi-strands of barbed wire, electric fencing or using a combination.

## Stud Rail

---

Stud rail has been a popular choice for many years, with good reason. Stud rail is extruded PVC with two strands of 2.5mm high-tensile galvanised wire molded into the outer edges. Once constructed and tensioned, this type of fence needs little maintenance and will look great for many years. Stud rail is chew-resistant and does not require painting or treatment and is rust-proof.

## The Right Gate For The Job

---

Choosing the right gate means taking into consideration several factors; the type of premises, the purpose of the gate, who needs access and who or what doesn't; the size of the entrance; how much maintenance; and budget.

We can assist you in considering your options and we will recommend, supply and install from a wide range of secure, practical and decorative gates including:

- Steel gates
- Security gates
- Wooden gates
- Pedestrian and bridle gates
- Kissing gates and stile kits
- Barrier gates

Additionally we install all types of rural gates, cattle grids, bridges, stiles, steps and other installations to maintain rights of way.

"I have worked with Akita for the past two years on the Sandwich Town Tidal defence scheme whilst they assisted in completing various works packages. Their understanding of our business needs with regards to implementing the beyond zero culture enables them to provide us with the required high standards of work whilst being reliable and efficient. They have delivered the scope of works within our required budget and in a professional manner. I would not hesitate to enable them to assist on future projects if the opportunity arises."

**Matthew Gould Jackson**  
Civil Engineering  
Sub Agent

As a large, independent supplier of commercial fencing, we extend our services to large domestic properties.

Please do not hesitate to contact us for a free site survey, to discuss your fencing, access, security and privacy requirements and to receive our recommendations and quotations.

- Equine fencing
- Agricultural fencing
- Site hoarding
- Wildlife & Ecological fencing
- Gates & access
- Security & privacy
- Commercial & domestic
